***What kind of product/solution does your company offer related to zero emission delivery of goods?***

***Paxster AS offers a 100% electric vehicle for sustainable and efficient distribution of goods in urban areas.***

*We have developed an electric vehicle, tailor made for smart city logistics solutions whether that is last mile delivery of post and parcels, food and retail or any other kind of goods or service of a suitable kind. The Paxster has a small footprint and is ¼ the weight of a regular van and with its unique, semi-open design, having the driver's ergonomics and the environment in focus, both the users and the public meeting them on the roads appreciate this work tool.*

*With a loading capacity of more than 1m<sup>3</sup> and a 9,2kWh battery, the Paxster will take you up to 100km on a full charge at maximum speed of 45 or 60km/h.*

Paxster with DHL Express in Oslo. Geofencing available with automatic speed reduction in defined areas.

## ***How can your product/solution solve needs and challenges of public/private actors?***

### ***Small footprint - Big impact***

*With the explosive growth in e-commerce, changing consumer behaviours and expectations in combination with growing cities, less space available for vehicles to move and the urgent need for more sustainable solutions, a change is urgently required. Logistics companies under constant cost pressure, are forced to find greener, more cost-efficient solutions.*

*40% of parcels delivered today are smaller than a shoe box in size and 30% of deliveries are single units. Consumers of tomorrow will no longer accept having their new cell phone delivered by a courier driving a large diesel-van to their doorstep. A change is required and Paxster wants to contribute to accelerate sustainable logistics for smart cities through our experience working with companies already taking responsibility and together we can find solutions suitable for your operations.*

Amedia / Helthjem invested in 300 Paxsters for distribution of newspapers, post and parcels across Norway.

## **Examples and advantages**

*“We have found Paxster to be a useful tool, especially in routes with many stops as we save seconds on each stop. We have seen time reduction in the range of 10-15% on routes suited for Paxster.*

*Norway is a challenging country with regards to weather and temperature, but the Paxster has proven itself to handle the challenges well.”*

***Gunnar Inderberg, Senior Vice President – Operational Development - Posten Norge AS***

*“The Paxster is proving a great investment and has provided a great boost. It enables us to compete with bigger stores by offering a service they cannot match at the moment. We offer a 30-minute order and delivery service.”*

***Mr. Jasvinder Rhoud, Premier Store Leeds, UK***

Paxster part of DPD vehicle fleet in Westminster, London distribution center.  
An example of the growing number of city central micro depots we see in Europe.
